

Motor Imagery Practice Steps

Mental rehearsal for calm, purposeful movement

Choose one movement

- Select a simple action such as standing, reaching, turning, or taking a step.
- Practice only in a safe position. You may remain seated for the full exercise.

Imagine in detail

- Picture the starting position, direction, speed, and finish of the movement.
- Include sensory details such as weight shift, contact with the floor, and the feeling of the movement.
- Imagine the movement as smooth and unhurried.

Repeat and reflect

- Mentally rehearse the movement three to five times.
- Notice whether the image becomes clearer or more comfortable.
- Discuss movement concerns with your clinician or physical therapist.

Important

This guide is educational and does not replace medical care. Adapt or stop the practice if you feel uncomfortable, and consult your healthcare team about individual safety needs.
