

Mindful Walking and Safety

Awareness in movement with seated alternatives

Safety first

- Use your usual mobility aid and follow your clinical team's recommendations.
- Practice near a stable support or with another person when appropriate.
- Stop if you feel unsteady, dizzy, fatigued, or unsafe.

Walking practice

- Pause before moving and notice both feet.
- Shift weight gently, then take one comfortable step.
- Notice contact, pressure, and the transition from one side to the other.
- Keep attention broad enough to remain aware of the environment.

Seated alternative

- Imagine the phases of stepping while seated.
- Alternately press each foot into the floor.
- Pair the movement with a comfortable breathing rhythm.

Important

This guide is educational and does not replace medical care. Adapt or stop the practice if you feel uncomfortable, and consult your healthcare team about individual safety needs.
